## UCC » Univention Corporate Client

The convenient and efficiently administrated operating system for PCs, notebooks and thin clients

**Univention Corporate Client (UCC)** is a flexible and very cost-effective alternative for the operation and administration of PCs, notebooks and thin clients in companies and institutions. The software contains a Linux-based desktop environment optimised for business use. In addition, UCC serves as a platform for access to remote desktop solutions and virtualized desktops as well as browser or terminal server-based applications.

UCC allows the considerable adaptation of the desktops to the respective hardware and intended application. In addition, it can be managed conveniently and efficiently via the web-based Univention Management Console. UCC also guarantees integrated administration procedures for users, clients, desktops and rights and effectively does away with the use of different, uncoordinated tools.

Policy-based management of users, rights and desktops

### What does Univention Corporate Client include?

Univention Corporate Client (UCC) is an expansion to the Univention Corporate Server which can be installed from the Univention App Center. Among other things, this expansion includes:

» Additional functions for Univention Management Console for the administration of PCs, notebooks or thin clients, which are operated with UCC (for example, rollout, distribution of updates, configuration of client software or desktops)

» Preconfigured, immediately ready-to-use compositions of client operating systems and desktops for a wide range of application scenarios (thin client and complete desktop)

» A tool kit for creating personalised desktop configurations for special scenarios

» Like all Univention products, UCC is delivered with maintenance and support.

Administrators benefit from the uncomplicated standardised administration and the policy-based configuration of the clients in the UCS management system. Possibilities for policy-based software distribution and maintenance and the compilation of desktops in containers and organisational units simplify and accelerate the administrative work. Consequently, UCC is the ideal platform for access to hosted, virtual desktops or web-based applications. In addition to optimal support of Microsoft Windows, UCC expands the features already included in UCS for mounting Linux clients with the possibility of completely managing Linux-based clients.

### Are you also familiar with our core product Univention Corporate Server (UCS)?
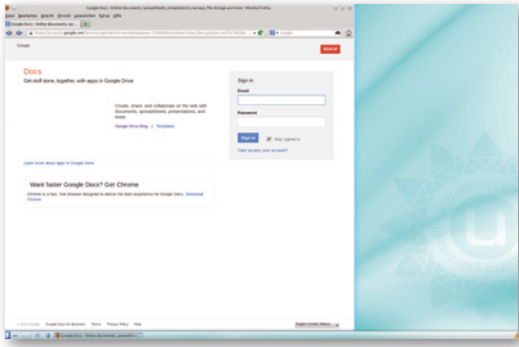

**UCS is the standardised, easy-to-use Linux corporate solution which also includes a comprehensive management system in addition to its actual operating system.**

In addition to all relevant server services, with this identity and infrastructure management system UCS also offers all the important functions for the administration of small and larger IT environments. It integrates ideally in existing systems and can be expanded with a large number of certified applications (groupware, back-up, fax, network monitoring, virtualization, etc.) from different manufacturers.

# u: » Open for everyone…

## …simple IT management even in heterogeneous environments.«

User interface of Linux desktop UCC

After all, UCC also includes an integrated Linux desktop with the tried-and-tested and user-friendly user interface KDE and the Office suite LibreOffice. That translates to more choice and flexibility for users.

### Ideal for access to:

» Microsoft Windows Terminal Server (as of 2003)

» Citrix Presentation Server / Citrix XenApp (ICA)

» Linux terminal servers (UCC terminal services)

» VMware Desktop Virtualization (VMware View)

» As such, optimally suited for use as a convenient Linux desktop

### Advantages of Univention Corporate Client

» Massive reduction of administration efforts thanks to fully automatic installation, central update management and integral user and rights management via policies and desktop profiles

» Support of many thin client devices and connected hardware

» Support of all popular remote desktops and desktop virtualization environments from Microsoft, Citrix, VMware and Univention

» Ideal for use in heterogeneous environments with Linux & Windows desktops

» Cost-effective in terms of the costs for implementation, maintenance, administration and operation

» Hardware monitoring of servers and clients with Nagios (including notification mechanism in the event of collapses)

» Open standards ensure easy adaptability and simple expansion

» UCC is 100% Open Source software

### Functions of Univention Corporate Client

» Central and integrated management of users, clients and desktops with web-based and intuitively operable management tool

» (Group) policies and profile-based management of users, policies and desktops

» Access to Microsoft Windows and Citrix remote desktop solutions

» Comprehensive support of desktop virtualization environments

» Linux desktop KDE, Office package LibreOffice and web browser Firefox

» Preconfigured desktop images for notebooks, thin and fat client end devices

» Ready-to-use Linux terminal server for provision of desktops on thin clients

» Tool for creating individually adapted desktop environments for thin and fat clients

**System requirements:**

/ Server: At least one UCS instance is required for the rollout and management of UCC (a virtual instance can also be used)

/ Client: UCC supports a wide range of popular PCs, laptops and thin clients and kiosk systems from different manufacturers (e.g., HP, Igel, Fujitsu Technology Solutions …)
